

Installation Instructions

Cheap Staples

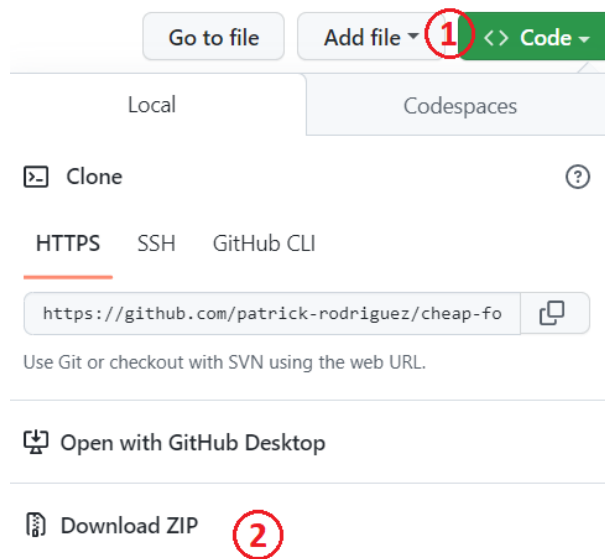

Software Dependencies

Cheap Staples requires that you have **Python3** installed prior to running the program. Ensure you have it installed before continuing to installation.

The latest version of python can be downloaded at their website: <https://www.python.org/>

Installation

- 1) **Download CheapStaples** from the [Github repo](#)
 - a) Press the green “<> Code” button to open a submenu
 - b) Press “Download ZIP” to save the repository into your Downloads folder.

- 2) **Unzip** the folder you just downloaded.
 - a) Open you file explorer (or finder on Mac) and navigate to your Downloads folder
 - b) Right click on the folder “cheap-foods-main”, and select “Extract All”. Save the unzipped folder to your Downloads folder.

3) Run `installer.py`

- Open up command prompt (or terminal if on Mac)
- Navigate to the folder you unzipped the folder into.

In this example, we have the folder saved in our Downloads folder, so we need to type:

```
cd Downloads/cheap-foods-main
```

```
C:\> Command Prompt

C:\Users\tnade>cd Downloads/cheap-foods-main

C:\Users\tnade\Downloads\cheap-foods-main>
```

If the folder is not saved in your Downloads, you'll have to know the path to it and use:

```
cd INSERT/YOUR/PATH/HERE/cheap-foods-main
```

- Run the command

Type `python3 installer.py` to run the installer. This will install all the necessary libraries Cheap Staples needs to use in order to run properly.

```
C:\Users\tnade\Downloads\cheap-foods-main>python3 installer.py
```

If you're using an older version of python, retype the command using `python` instead of `python3`.
